

Is your roof a loaded frost grenade?

DEVI ice and snow melting systems are much more than just roof applications. DEVI systems also come at use when it is a matter of keeping traffic smooth and pedestrians safe.

① *With a DEVI system, entrances to offices, shops, hospitals etc. are kept permanently clean of ice and snow.*

② *A DEVI system can also be used in private dwellings, in pavements, on steps or in a private garage driveway.*

③ *Wherever smooth traffic under all weather circumstances is necessary, a DEVI ice and snow melting system provides the solution.*

④ *Even within air transport, DEVI ice and snow melting systems are put at use to provide an optimum of safety during the winter.*

It is dangerous...

not to disarm your building. Once the split pin has been removed it is only a matter of time before ice, snow and frost will destroy gutters, drain pipes and brickwork and set up a chain reaction of damages. Clogged up gutters and drain pipes form dangerous ice and snow formations that turn into sharply pointed icicles – the winter's sharp weapon – that might harm your guests, customers and other passers-by on the pavement. Surrender now and install DEVI roof systems and make roof and gutters ready for winter. The sooner the better.

...and it is expensive

The bombs hit far and wide (widely). The roof construction and brickwork of the building sustain during the battle of winter. And when the winter is over you often experience that the size of the damages are beyond your worst fear. Humans, buildings and economy are all in danger.

Prepare yourself to meet the enemy – and repel the attack

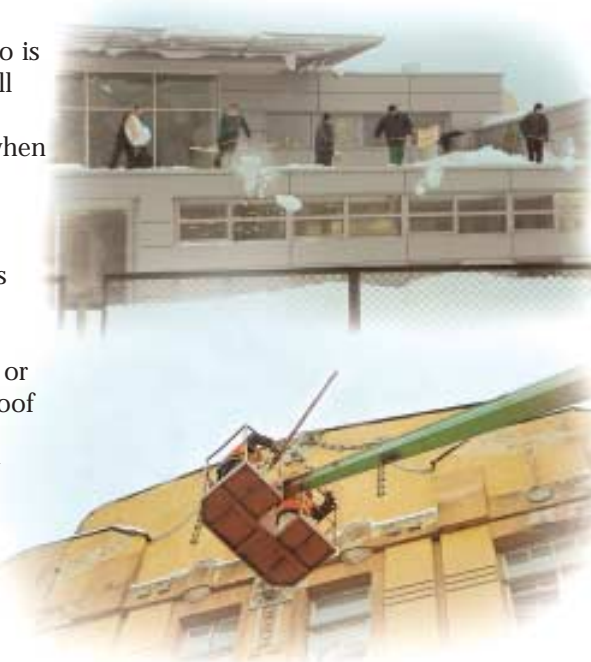

DEVI roof system is a cost effective (economical) solution with a very accurate thermostat control. With DEVI roof system you invest in a system that prevents damages. The heating cables are installed directly on the roof, at the valleys or in gutters and drain pipes, and in this way prevent expensive damages on roof and building. Only one damage in ten years is enough to make the investment profitably. You do not have to worry about damages of the building caused by the winter. And you do not have to explode with annoyance because you have to wait for help with repairs once the damage has

occurred or is very close – at a time where every body else also is in need of the same help. Install DEVI roof system as soon as possible in order to be ready when the night frost sets in.

Advantages:

- Keeps gutters and drain pipes free of ice and snow.
- Leads the melt water away.
- No dangerous ice formations or snow accumulations on the roof construction.
- No risk of ice/icicles or snow falling down on passers-by.
- No damages on building and roof constructions when the winter is over.

The permanent and flexible solution

DEVI systems for roof consists of deviflex™ heating cable controlled by an electronic devireg™ thermostat sensors. DEVI can provide a tailor-made solution for every kind of use.

Install DEVI roof system and get a permanent solution that works accurately, when you need it, and only as much as you need. Neither more nor less. You only pay for the consumption you use. A combination of sensor and thermostat register temperature, moisture and precipitation – accurately – and automatically the on/off function makes sure that the heat is adapted accordingly –and with that the energy consumption. The system and the elements are maintenance-free and the installation is invisible which means that it does not disfigure the building.

Safety and security - and 10 years guarantee

DEVI is Europe's leading company within heating cable solutions. DEVI's heating cables represent the highest level as regards technology and quality. DEVI roof system is a robust and economical investment and then it is easy to install. Thermostats and heating cables are developed and produced on two modern ISO 9000 certified factories in Vejle, Denmark. It ensures a high quality and along with that a guarantee of a heating solution that will last for many years. There is a ten-year guarantee on DEVI heating cables once the requirements of installation have been observed.

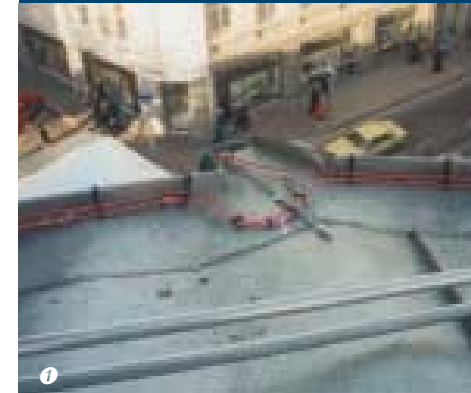

With DEVI roof system you will win the battle against the destructive attacks of winter.

Contact your local electrical installer for more information on DEVI heating systems.

Heating cables can i.e. be mounted

- ① in roof gutter and drainpipes on an apartment house
- ② on a gravelled roof valley of a factory plant
- ③ directly on top of a felt roof or
- ④ on slanting steel roof plates

DEVI has more than 25 years of experience in the appliance of ice- and snow melting systems for roofs. DEVI systems are mounted everywhere where winter creates problems, – from Northern Norway over Central Europe and Russia to China.

There are DEVI systems in all sorts of roofs, gutters, roof valleys and drainpipes, – both in private dwellings, in office buildings and in the industry.

DEVI systems consist of deviflex heating cable controlled by an electronic devireg™ thermostat sensors. We can provide a tailor-made solution for every kind of use.
